

Equipment Solutions Guide

Grand Format Production Printers

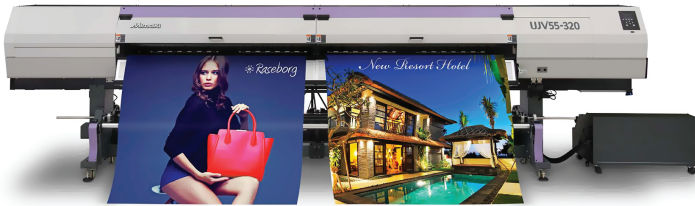

Grow into production printing the smart way with exceptional print quality, robust construction, and cost-effective solutions that our EFI and Mimaki printers offer. From roll printing to hybrid printing to true-flatbed printing, ITNH's portfolio offers grand-format printers that will fit your budget and impress your customers.

Mimaki

efi

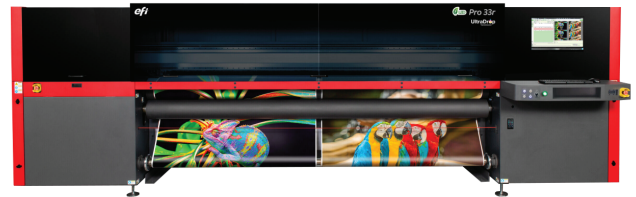

ROLL:

Mimaki UJV55-320

The Mimaki UJV55 is a strong entry into grand-format roll printing because it delivers grand-format 3.2m output, solid production, and versatile UV LED printing (including white and clear gloss ink) for a wide range of signage and graphics applications.

efi Pro 33r

The EFI Pro 33 will take your production capabilities to the next level by combining high-quality imaging, fast throughput, and efficient LED technology that lowers operating costs while expanding application capabilities and profitability.

HYBRID:

efi Pro 16h +

The EFI Pro 16h+ is highly cost-effective because its LED curing technology reduces energy use, maintenance, and consumables while enabling a wide range of applications on both rigid and roll media—all contributing to a low total cost of ownership and higher-margin output.

efi Pro 30h +

The EFI Pro 30h+ (30f+) complements this by delivering high production speeds and large-format capability that lower cost per print, allowing shops to produce more applications faster and more profitably without significantly increasing operating expenses.

FLAT BED:

Mimaki JFX600-2513

The Mimaki JFX600 stands out in true flatbed production with exceptional print quality driven by high-resolution output and advanced print technology. Offering broad application versatility across substrates like acrylic, wood, metal, and plastic, this amazing printer is available with 8'x4' or 8' x 10' bed size!

efi Pro 30f +

The EFI Pro 30f+ will plow through production with great image quality and precision, combined with robust media handling. The result is consistent, high-quality results across a wide range of rigid materials, making it ideal for diverse, production-level applications. The Pro 30f + has a bed size of over 6' x 10' and can print on items up to 4" thick!

CUTTING:

Summa F1625

The Summa F Series flatbed cutters are the perfect companion to Mimaki and EFI printers because they come in a wide range of table sizes—from compact formats to full 3.2 m production systems—making it easy to match the cutter to any printer output and scale with your operation.

Summa F3232

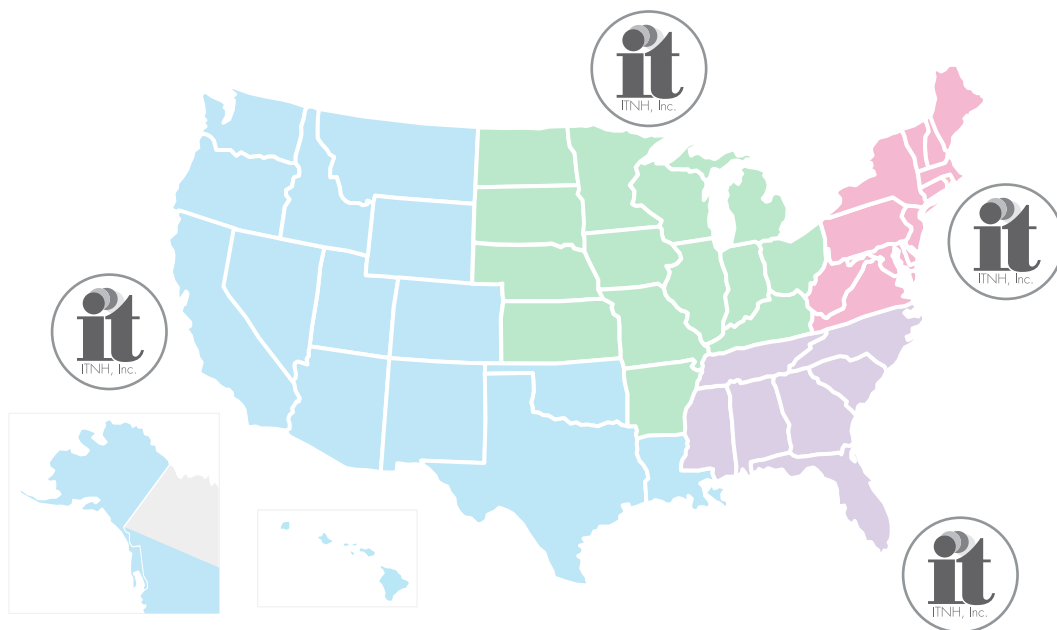

Summa flatbed cutters also offer unmatched tool versatility with a modular, multi-head system supporting 15 + interchangeable tools, allowing you to handle everything from kiss-cutting and routing to creasing and textile cutting on the same platform for maximum application flexibility.

Service & Support

Born over 30 years ago as an inkjet service company, service is our backbone. Our team is dedicated to providing the highest quality equipment, software, consumables and customer care in the industry. Please reach out to us for any questions or concerns related to your equipment .
